

# DEFENDER SIGNAL BLOCKER WITH **RPF™**

OT001118/119 Defender Signal Blocker Grey/Black

Secured by Design

Police Preferred Specification

High quality mobile phone & key fob blocking pouch

## Introduction

The Defender Signal Blocker is an innovative product that combats car crime and dangerous driving. The pouch can be used whilst driving to deter mobile phone use and also to store keyless entry fobs to prevent car theft via relay attacks.

When a fob is stored and sealed inside the pouch the frequency signal is completely blocked, meaning tech-savvy thieves are unable to scan or boost the proximity signal to gain unauthorised access to a vehicle.

The unique, specialist **RPF™** material lines the pouch and provides unrivalled protection, with double-stitched seams ensuring no rips or frays that will affect performance.

Also ideal for storing and blocking mobile phones of all sizes, to prevent distracted driving.

Perfect as an educational tool, with extensive branding options on Grey, Black or Red finishes, as well as a customisable insert card.

## Contents

- 1 x Defender Signal Blocker with **RPF™** material
- 1 x Educational Insert Card
