

# DEFENDER SIGNAL BLOCKER MINI

OT01238 Defender Signal Blocker Mini

Keyless vehicle fob faraday pouch with key ring

## Introduction

The Defender Signal Blocker Mini is a quality faraday pouch to store keyless vehicle fobs to prevent vehicle theft via relay attacks.

When a fob is stored and sealed inside the pouch the wireless signal is completely blocked, meaning tech-savvy thieves are unable to scan or boost the proximity signal to gain unauthorised access to a vehicle.

The specialist *RPFTM* material lines the single pouch and provides unrivalled protection, with double-stitched seams ensuring durability.

The Mini has a handy key ring enclosed for easy attachment of your vehicle fob. It can also be stored practically with the built-in key ring hook on the rear.
